

Broad spectrum of services - Medcover

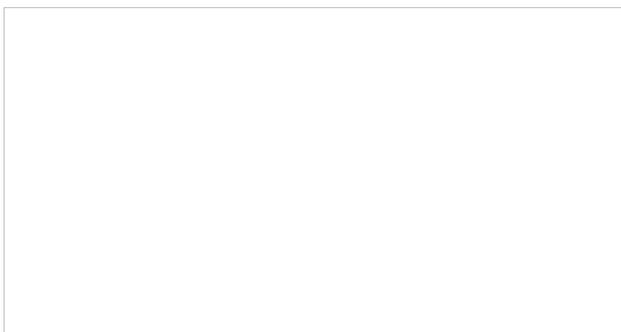

[Medcover](#)

Broad spectrum of services

Customers of Diagnostic Services can rely on a comprehensive menu of tests. The tests cover allergy and autoimmune diagnostics, bacteriology, parasitology, biochemistry and immunochemistry, blood group diagnostics/transfusion medicine, tumour markers, clinical chemistry, cytology, haematology, histopathology, human genetics, hygiene, immunology and immunochemistry, infectious diseases, microbiology, molecular biology, pharmacology/toxicology. Synevo also operates an extensive network of high-quality and standardised blood drawing points and consultation centres dedicated to collect samples of blood, urine or tissue to send them directly to its laboratories.

Clinical trials

Clinical trials is another field we excel. Synevo Central Lab (SCL) is a separate and specialised unit of Diagnostic Services dedicated exclusively to support clinical trials across Europe and further field with our partners.

SCL coordinates every aspect of a clinical trial's diagnostic testing, starting from study set-up and laboratory supplies through to investigator site training and logistics planning to resolution of data queries and final data submission. SCL has an extensive menu of more than 1,500 validated assays, from routine and safety analysis to advanced diagnostics required for efficacy, in a wide range of disciplines.

SCL provides clients with 24/7 access to a real-time data through the Web-based, secure and user-friendly

application, known as LabOne. The application allows monitoring of trial progress, observing clinical trends and generating standard and custom reports.

In 2016, Medcover also entered the German clinical services market. At the end of 2017, Medcover was running 16 ambulatory clinics offering care in endocrinology, gynaecology, diabetology, rheumatology, HIV, methadone substitution and genetics. These are located all across Germany. The German expansion is focused on specialist doctors who are reliant on good quality diagnostics for their patients within chronic diseases, e.g. endocrinological, diabetic, gynaecological, rheumatic and genetic disorders. Currently, the network employs approximately 100 physicians. Through this presence, Medcover is able to offer a range of outpatient medical care (both primary and specialty), whilst improving quality and patients' experience.
